EDUCATION

University of Nebraska-Lincoln — Lincoln, NE
B.S. in Data Science and Mathematics — May 2026
Cumulative GPA: 3.705

- **Minor:** Japanese Studies
- **Study Abroad:** USAC Nishinomiya at Kwansei Gakuin University (Fall 2025)
- **Coursework:** Machine/Deep Learning, Data Structures, Statistical Inference, Operations Research

TECHNICAL SKILLS

- **Programming:** Python (pandas, NumPy, matplotlib, scikit-learn), R, SQL
- **Tools & Platforms:** Git, Tableau, RStudio, Jupyter, LaTeX, Excel (XLOOKUP, INDEX-MATCH)
- **Concepts:** Regression, Classification, ANOVA, Optimization, Outlier Detection, Statistical Inference, Data Validation

PROFESSIONAL EXPERIENCE

National Indemnity (A Berkshire Hathaway Company) — Omaha, NE
Pricing Intern — June 2025 – August 2025

- Identified pricing discrepancies between legacy and newly deployed rating systems by querying and analyzing premium and policy data across multiple SQL tables
- Validated premium calculations against regulatory requirements by flagging irregularities through systematic joins and filters on production data
- Automated rate checking workflows using SQL and advanced Excel functions

UNL Course Evaluation Services — Lincoln, NE
Student Worker — May 2023 – May 2026

- Validated and managed structured datasets for 1,000+ courses per semester, maintaining data integrity across academic units using Tableau
- Built standardized validation checks and documentation that reduced processing errors and improved data reporting

UNL Statistics Department — Lincoln, NE
Grader for Statistics and Applications — August 2024 – December 2024

- Evaluated weekly assignments for 30 students with detailed feedback on statistical methodology and interpretation

PROJECTS

Health Risk Modeling in Lancaster County, NE — Report (PDF) | Notebook

- Found education (r = 0.75) and SNAP (r = 0.76) as essentially tied predictors of obesity across 78 Lancaster County census tracts using ACS, CDC PLACES, and OpenStreetMap data. Education leads the random forest at importance 0.527 vs SNAP at 0.241.
- Built linear regression and random forest models (R^2 up to 0.61) using geopandas and OSMnx. Extended the analysis post graduation by adding SNAP and age distribution variables.

Lancaster County SQL Analysis — Notebook

- Designed a normalized DuckDB schema across four domain tables and wrote five analytical queries, including window functions (NTILE, RANK OVER PARTITION, AVG OVER PARTITION) across joined tables
- Found near-grocery tracts averaged the highest obesity (36.4%), showing structural poverty predicts health outcomes more reliably than physical distance to food across 78 census tracts

HONORS & ACHIEVEMENTS

- **IBM Data Analyst Professional Certificate:** Coursera (Fall 2024)
- **Dean's List:** UNL (Spring 2023, 2025, 2026)
- **Eagle Scout:** Boy Scouts of America (2021)
